The Arthur Flores "Premier" Installation Protocol

24 Years of Master Contractor Excellence

Step 1: The Initial Consultation. We don't provide "ballpark" numbers over the phone. We measure your property, analyze the drainage, and discuss the specific materials that will work for your unique soil and wind corridor.

Step 2: Custom Design & Procurement. Once approved, we move into the design phase. We source high-grade cedar and steel from trusted, verified suppliers—no "big box" store materials that are prone to warping.

Step 3: Precision Installation. Every post is set to the 36-inch "Texas Soil Stability" depth. Our foreman oversees the alignment of every picket, ensuring the craftsmanship meets the Arthur Flores stamp of approval.

Step 4: Final Inspection & Cleanup. We walk the perimeter with you. We don't consider the job finished until you are satisfied that your fence is perfectly installed, stable, and clean.
